

Annual report – CS club

The 2019-20 academic year was a great start to the Computer Science Club, with the release of the club's annual Computer Science Newsletter, and participation in the International Olympiad in Informatics and approved affiliation with Hack Club, an international Computer Science society.

The club published the annual Computer Science Newsletter summarising the latest advancements in digital technologies like Quantum Computing and Artificial Intelligence, along with future job opportunities in CS and setting challenging algorithmic problems for the readers!

The members also participated in the International Olympiad in Informatics, an internationally renowned Olympiad (the second largest international Olympiad, in fact!) that encourages students to develop problem-solving skills and algorithmic thinking. Four members of the club made it to the national round - Shree Singhi, Siddhant Kejriwal, and Vikhyat Agarwal from grade 10 and Rithvik Chatterjee from grade 12, who also qualified for the extremely selective national training camp.

The club also gained membership to the prestigious Hack Club, a community of Computer Science clubs with more than 10,000 students worldwide. This opens up a plethora of opportunities for the students as a club, including carefully curated resources and tutorials along with assistance in hosting events in the form of access to premium software and grants worth thousands of dollars!
